

Olist E-Commerce Dashboard Insights

Student Name: Ruth Musanhu

Student ID: 670474

Introduction

This report presents three key business insights from the Olist E-Commerce Sales and Delivery Dashboard. The insights focus on product-category performance, regional sales concentration, and customer payment behaviour.

Insight 3: Credit Cards Dominate Customer Payments

Credit cards accounted for **74,284 orders**, representing approximately **75.31% of all orders**.

This indicates that Olist relies heavily on card payments. Management should prioritise reliable card-payment processing, fraud prevention, and credit-card promotions while still supporting alternative payment methods.

Insight 1: Health and Beauty Leads Product Sales

The Health and Beauty category generated approximately R\$1,456,170 in total sales, making it the highest-performing product category.

This indicates strong customer demand in this category. Management should maintain sufficient stock levels, strengthen supplier relationships, and prioritize targeted promotions for health and beauty products.

Insight 2: São Paulo Is the Strongest Regional Market

São Paulo generated approximately R\$6,041,485 in total sales, making it the strongest customer market in the dataset.

This shows that São Paulo is a critical region for Olist. Management should prioritize customer retention, logistics capacity, delivery reliability, and targeted marketing in this state.

Insight 3: Credit Cards Dominate Customer Payments

Credit cards accounted for 74,284 orders, representing approximately 75.31% of all orders.

This indicates that Olist relies heavily on card payments. Management should prioritize reliable card-payment processing, fraud prevention, and credit-card promotions while still supporting alternative payment methods.
